

CRM Standard Operating Procedures

Customer Profile Lookup • Job Booking Channels • Activity Logging • Duplicate Cleanup

Purpose of this guide

This guide gives Prime Auto Detail employees a consistent, official reference for looking up customers, booking jobs across all four intake channels, logging activity correctly, and cleaning up duplicate records when they occur.

CORE PRINCIPLE

"Search first. Book from the card. Confirm the Booking Lifecycle panel. Every time, no exceptions."

Origination: Generated by Claude (Anthropic) for Prime Auto Detail, June 2026 (Version 3)

Universal Rules (Apply to ALL Four Channels)

- **Always search before booking.** Go to Customer Profiles and search by name, phone, or email before creating any booking. This prevents duplicate records.
- **Always book from the customer card.** Use the green Book Job button on the customer's card — never go to the Bookings page directly for a known customer. Booking from the card pre-fills their exact database ID, guaranteeing a perfect link every time.
- **Booking Lifecycle panel is your confirmation.** After any booking is created, check the Booking Lifecycle panel on the right side of the customer card. If it still says "No Booking Data Yet," the booking is not linked correctly.
- **Log Activity is your default.** For 90% of daily interactions (calls, texts, voicemails, notes), use Log Activity on the customer card. One line is enough.

Channel 1 — Phone Call Intake

Recommended Flow (Best Way)

- Go to Customer Profiles → search by name, phone, or email
- If found → open their card. If not found → click + Add, create profile, save it
- On their card → tap Log Activity → enter a quick note (e.g. "Inbound call — wants full interior Thursday")
- On their card → tap the green Book Job button
- Fill in date, service, vehicle, price → add a booking note for anything job-specific → Save
- Verify the Booking Lifecycle panel on the right shows the job

Alternative Flow (Rush Only — Use with Caution)

- Go directly to Admin Bookings page → create booking manually
- System will auto-match by Email → Name → Phone
- If it matches on any one field, it links correctly

■ **WARNING:** If the customer used a different name/email/phone than on file, a duplicate Prospect record will be created. Do NOT use this for repeat customers unless you are certain of their exact original email or name.

The Rule: Search → open card → Log Activity → Book Job button → confirm Booking Lifecycle panel

Channel 2 — Website / Email Inquiry

Recommended Flow (Best Way)

- Read the inquiry fully — note name, vehicle, service interest, date preference, contact info. Keep the email open.
- Go to Customer Profiles → search by name AND by email
- If found → open their card. If not → create new
- Tap Log Activity → note the inquiry (e.g. "Inbound email — wants full detail, prefers Thursday")
- Reply via Engagement Hub — offer 1–2 available time slots. This auto-logs your reply in the Correspondences tab.
- Once customer confirms → tap the green Book Job button on their card
- Fill in job details → save
- Tap Log Activity again → "Customer confirmed — booked for [date]"

The Rule: Search → Log Activity (inquiry) → Engagement Hub (reply) → Book Job button (on confirm) → Log Activity (confirmation)

Channel 3 — Direct / Admin Booking

Recommended Flow (Best Way)

- Go to Customer Profiles → search first, even if you're certain who it is
- Open their card → tap the green Book Job button
- Fill in service, date, vehicle, price → add a booking note if anything unusual applies → Save
- Verify the Booking Lifecycle panel shows the job
- Tap Log Activity → note how the booking came in (e.g. "Walk-in", "Repeat customer texted me", "Outbound call — booked full detail Friday")

The Rule: Search → Book Job button → save → confirm Booking Lifecycle → Log Activity

■ **WARNING:** Never start a booking from the Admin Bookings page for a known customer. The Book Job button on their card is the ONLY guaranteed way to link the booking correctly in the database.

Channel 4 — Online Booking (Automatic)

What Happens Automatically

The online booking page shares the exact same database save function as the admin backend. When a customer books online, the system runs a 3-tier cascade match:

- Tier 1: Exact email match
- Tier 2: Name match (if no email match)
- Tier 3: Phone number match, strips all formatting (if no name match)

If any one of the three matches, the booking links perfectly. No action needed from you.

Your Only Actions After an Online Booking Arrives

- Confirm the booking landed in your calendar correctly (service, date, vehicle)

- Open the customer's card → check the Booking Lifecycle panel shows the job
- Optional → tap Log Activity → "Online booking received — full interior Thursday 9am"

If Booking Lifecycle Says "No Booking Data Yet" (Duplicate Was Created)

This only happens if the customer used a completely different email, name, AND phone than what's on file.

- **Fix:** Open the booking → click Edit
- Use the Select Customer dropdown → choose their correct master profile → save
- Go to Customer Profiles → find and delete the duplicate Prospect record

The Rule: Do nothing — system handles it. Just verify Booking Lifecycle panel shows the job.

Customer Card Guide

What Each Timeline Tab Actually Shows

Tab	What It Shows	Database Source
All Data	Everything combined — bookings AND engagements. Always keep on this tab.	bookings + engagements tables
Bookings	Only booking records linked to this customer. If empty, booking is missing or on a duplicate profile.	bookings table
Notes	Only Admin Directives permanent notes. Must click Save Customer after adding.	customers.notes column
Correspondences	Only entries made via Engagement Hub. Formal emails and detailed messages.	engagements table
Activities	Only entries made via Log Activity. Calls, texts, voicemails, quick touchpoints.	engagements table

■ **Key Insight:** A reschedule event showing in All Data does NOT confirm a booking exists. A reschedule is an engagement log record, not a booking record. Always check the Booking Lifecycle panel to confirm a real booking is linked.

What Each Feature Does — Use This When...

Feature	Feeds Into	Use When...
Engagement Hub	Correspondences tab	Sending a detailed email or formal message to the customer
Write Letter	PDF only	Generating a formal PDF letterhead document (rare)
Log Activity	Activities tab	Any quick touchpoint — calls, texts, voicemails. Your default 90% of the time.
Admin Directives & Notes	Notes tab	Permanent must-see rules about the customer (gate codes, special instructions). Must click Save Customer.

Every Time You Open a Customer Card — Do This in Order

- Check Admin Directives first — any permanent warnings or rules? Read before doing anything else.
- Glance at Booking Lifecycle panel (right side) — confirms whether a booking is properly linked.

- Keep timeline on "All Data" — full chronological story. Remember: events here don't always mean a booking exists.
- Tap Log Activity for any call, text, or touchpoint — one line, your default action.
- Use Engagement Hub only for formal emails (more than two sentences sent to the customer).
- Always use Book Job button to create bookings — never the Bookings page directly.

Fixing Empty Timeline Tabs

Bookings tab is empty: The booking was created from the Bookings page directly, not via Book Job on the card — the database link is broken.

- **Fix:** Open the booking → Edit → use "Select Customer" dropdown → choose the correct customer → save.

Notes tab is empty: The Notes tab only shows Admin Directives. Log Activity entries do NOT appear here.

- **Fix:** Click "+ Add Note" in Admin Directives section (now opens directly to Notes field after recent code fix) → type your note → click Save Customer.

Duplicate Customer — Cleanup Procedure

If a duplicate record was created for any reason:

- Open the orphaned booking
- Click Edit → use Select Customer dropdown → choose the correct master profile → save
- Go to Customer Profiles → find the duplicate Prospect record
- Verify it has no other data you want to keep → Delete it
